

YDC Sharing Summit

30–31 October 2017

Engage learners, enjoy teaching, grow communities

YuMi Deadly Maths is a unique pedagogical approach developed by QUT's YuMi Deadly Centre to improve capacity to teach mathematics. It brings maths alive, putting fun and enjoyment back into learning and teaching maths, which in turn leads to strong learning communities. In the words of one Year 4 student at a YDM school: *"At the start of the year ... everyone hated maths. But now ... with YuMi Deadly Maths, it's just awesome, it's fun, it's energetic! It's like games and learning!"* Teachers enjoy it too: *"YuMi has given me back a passion for maths, for teaching maths and for working with all students to love learning maths."*

The YDC Sharing Summit brings together education practitioners from YDC projects across Australia to share best practice and their experiences with YuMi Deadly Maths. YDC mathematics projects cover general pedagogy, enrichment and extension, remediation, acceleration and special education. You are invited to attend the summit to learn more about how to engage learners, enjoy teaching and grow communities through YuMi Deadly Maths.

Summit details
